Prescott-based Landscape Architecture Firm Adds Permaculture Specialist to Staff

PRESCOTT, Ariz. (Feb. 26, 2007)—T. Barnabas Kane & Assoc. is pleased to announce a new staff addition that will significantly augment the firm’s sustainable landscape design services.

Andrew Millison joins the Prescott-based firm as a designer and specialist in permaculture, a design system that integrates architectural, agricultural, ecological and social systems to create sustainable human habitats. He is the founder of Millison Ecological, a landscape contracting company specializing in ecological sustainability, heirloom plants and water harvesting. His other experience includes serving as construction foreman for a local sustainable landscape design firm and managing the Arcosanti farm, which includes gardens, greenhouses and a native-Arizona peach orchard.

“Bringing Andy into the office means we’ll be able to focus more and more of our design work on landscape that creates habitat, a concept that’s at the heart of our guiding philosophy,” said Landscape Architect and Principal Barnabas Kane. “It’s an influence that will expand our services and that we hope will better enable us to help shape the concepts affecting landscape design today.”

Prescott Firm Adds Permaculture Specialist -- pg. 2

Millison is looking forward to concentrating on design and working in the sustainable architecture arena, he said. "I can have a lot more impact culturally and ecologically by working at the higher volume Barnabas's firm enjoys," he said. "From a design perspective, I can share sustainable design ideals within a complete, practical understanding of how landscapes are constructed."

Millison earned a master's degree in horticultural preservation in 2002 and a bachelor's degree in ecological design and sustainability in 1997 from Prescott College. He teaches permaculture at all levels at Prescott College and at Ecosa Institute, a nonprofit, ecological design educational organization based in Prescott. His areas of specialty include water harvesting, food production and heirloom fruit trees of the Southwest.

Millison is a member of the Arizona Regis-Tree, an initiative to document and protect native plant species around the state. He resides in Prescott.

T. Barnabas Kane & Assoc. P.C. is a Prescott-based firm with more than 20 years experience creating award-winning sustainable landscapes. Specializing in ecological site planning and design, the firm's designers integrate architectural principles and environmental sensitivity to create habitat that unifies people, structures and environment.
